Flexible & Versatile

A range of modular, extendable garden hoop kits to create grow tunnels, polytunnels and other plant protection frames. The unique tunnel hoops come in half hoop sections and straight tubes, connected together by our ultra-robust hoop connectors to form complete arches. They can be easily extended by width and height to create larger hoop frames - choose from our wide range of tubes and connectors. This allows complete flexibility to grow what you want, where you want, and simply adjust your hoop size depending on what's in the ground!
