

POP-UP GREENHOUSE - INSTRUCTIONS

Your Pop Up Greenhouse kit includes: greenhouse, set of roof rods, roof rod connectors, guy ropes & pegs

Remove items from bag. Find a good location for the greenhouse – reasonably flat, soft ground is best

Pop greenhouse open so that it forms a three-dimensional structure. Assemble the rod sets so that they form two long rods

Unzip greenhouse. Insert roof rod connectors into each corner by peeling back the velcro strip, inserting one end into the sleeve and closing velcro to secure

Insert long rod into the roof rod connector. Bend rod gently and insert the other end into the roof rod connector at diagonally opposite corner. Repeat with other rod set. Tie rod sets at the apex of the roof where they form an X. Your greenhouse will now have a domed roof.

Attach guy ropes securely to the four outer tabs near the top of the greenhouse. Secure guy ropes to the ground using the metal pegs. Note: guy ropes are optional but are recommended in windy areas for extra stability.

Peg down the greenhouse in the four corners around the base with the L shaped metal ground pegs supplied. Your greenhouse is now complete and is ready to use.

Insert canes into tabs and push firmly into the ground for additional support in high winds as shown above

Recommended for added stability:

- 1. Choose a relatively sheltered spot for your cage – for example near/next to a barrier wall or wind shield**
- 2. Use additional pegs to secure your greenhouse to the ground**
- 3. Insert bamboo canes or similar tubes into the sewn tabs on the outside of the greenhouse. Push tubes/canes firmly into the ground on all sides**

To fold away your cage: 1. Grip diagonally opposite ends of the cage; 2. Bring hands together so that the cage is folded in half and forms loops on either side, with your left hand gripping the two spring steel sides in the middle and your right hand gripping the bottom of the loop; 3. Move your right hand inwards and upwards, bringing the loop into the centre; 4. At the same time, manoeuvre your left hand to allow the spring steel side slightly nearer you to slip underneath the one slightly further away; 5. Continue to push right hand towards the centre to form 3 loops, then grip the upper 2 loops with your left hand; 6. Using your right hand, bring loops together into a circle.
